Louis Chen

Backend Developer

Taipei, Taiwan

Backend Engineer with 4 years of experience specializing in architecting high-performance services, cloud infrastructure, and system optimization. Proven expertise in building systems from scratch, handling high-concurrency traffic, and implementing autoscaling containerized environments. Skilled in integrating automated development and monitoring workflows to ensure high availability while achieving significant cost-efficiency.

Work Experience

Backend Developer • BAT Mobile Inc.

OCT 2021 - Present

- Architected a Node.js Customer Data Platform (CDP) processing 300k+ monthly records; optimized query performance via caching and asynchronous processing to deliver frontend-ready datasets.
- Enhanced student platform stability for 670k+ users by refactoring APIs and implementing load balancing strategies, significantly reducing latency under high-concurrency traffic.
- Led GCP infrastructure setup (K8s, CI/CD, Firewall) and migrated VMs to GKE/Cloud Run to enable Auto-scaling and Rolling Updates, cutting costs by 30% while maintaining zero-downtime deployment.
- Established an automated monitoring and incident response system using GCP Error Reporting and Sentry, accelerating troubleshooting and reducing recovery time from hours to minutes.

Full Stack Developer (Contract) • BCIT

Sept 2020 - Dec 2020

- Architected a CMS dashboard enabling faculty to monitor and manage ISSP projects in real-time, enhancing project visibility and tracking.
- Collaborated in Agile teams to translate complex requirements into technical designs and actionable implementation plans.
- Delivered a fully functional MVP on schedule, iteratively refining features based on client feedback to ensure high system usability and alignment with faculty needs.
- Developed automated management features to replace manual workflows, significantly reducing administrative workload and improving overall efficiency.

Skills

Languages & Frameworks

- Python
- JavaScript
- Node.js
- Express.js
- React
- Flask
- FastAPI

Databases & Caching Systems

- MongoDB
- MySQL
- PostgreSQL
- SQLite
- Redis
- Memcached
- ORM / ODM

Cloud & DevOps Technologies

- GCP
- AWS
- Docker
- Kubernetes (K8s)
- Git (GitHub, GitLab)
- Bash
- Ansible

Education

British Columbia Institute of Technology

Dec 2020, Graduated with Distinction

Computer Information Technology Diploma: Computing and Information Technology

- Focused on web development, data analysis, and unit testing.

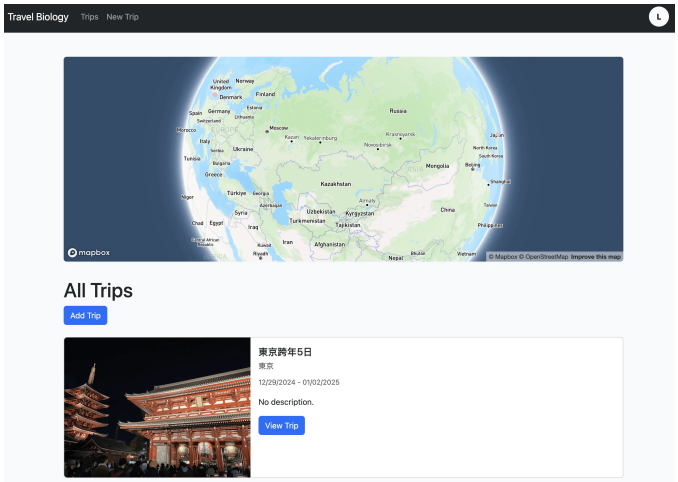
The University of British Columbia

May 2017

Bachelor of Arts: Psychology

- Advanced research, writing, and statistical analysis.

Projects



Travel Biology Blog

- Developed a full-stack travel planning platform using Node.js and React, integrating Mapbox for interactive map visualization.
- Implemented user authentication with JWT (Passport.js) and integrated Cloudinary API for cloud-based image storage.
- Designed a relational database with PostgreSQL to manage multi-dimensional trip data, including flights, budgets, and checklists.
- Technologies: Node.js, Express.js, Passport.js (JWT), PostgreSQL, React, Bootstrap, Mapbox, Cloudinary

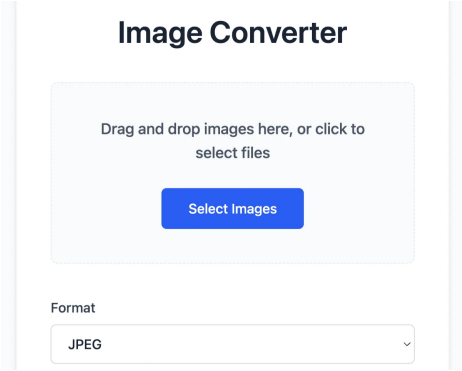


Image Converter

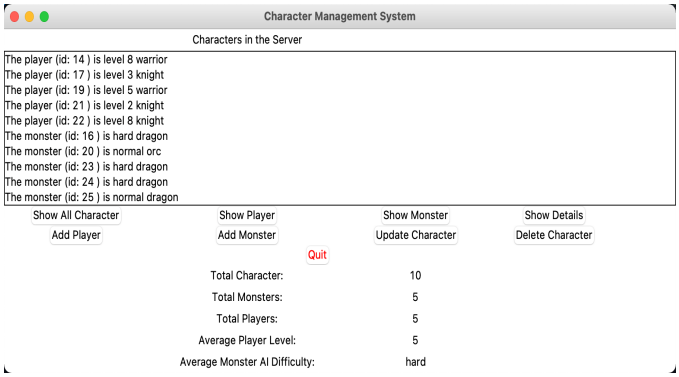
- Built an online image conversion tool using FastAPI and React, supporting JPEG/PNG/WebP formats with resizing and quality adjustments.
- Enabled batch processing with ZIP archive downloads and utilized Docker to ensure consistent environment isolation and rapid deployment.
- Technologies: FastAPI (Python), React, Tailwind CSS, Docker & Docker Compose



Character Management System

- Created a desktop application for game server management using Tkinter and Flask API to perform full CRUD operations.
- Utilized SQLite for data storage and applied OOP principles, UML modelling, and Unit Testing to ensure high code quality.
- Technologies: Python, Flask, Tkinter, SQLite, OOP, Unit Testing, UML
