

Louis Chen
Backend Developer
Taipei, Taiwan

Backend Engineer with 4 years of experience specializing in high-concurrency system design and cloud infrastructure management. I am experienced in building automated workflows and observability mechanisms to keep systems reliable and maintainable. My focus is on optimizing system performance and reducing operational costs without compromising system stability.

Work Experience

Backend Developer • BAT Mobile Inc.

OCT 2021 - Present

- Architected a Node.js Customer Data Platform (CDP) processing 300k+ monthly records; optimized query performance via caching and asynchronous processing to deliver frontend-ready datasets.
- Enhanced student platform stability for 670k+ users by refactoring APIs and implementing load balancing strategies, significantly reducing latency under high-concurrency traffic.
- Led GCP infrastructure provisioning using Terraform (IaC) and established CI/CD pipelines, IAM policies, and network security controls.
- Migrated legacy VMs to GKE and Cloud Run to enable autoscaling and rolling updates, cutting operational costs by 30% with zero-downtime deployments.
- Built an automated observability and incident response system using Prometheus, Grafana, and Sentry, accelerating troubleshooting and reducing average recovery time (MTTR) from hours to minutes.

Full Stack Developer (Contract) • BCIT

Sept 2020 - Dec 2020

- Architected a CMS dashboard enabling faculty to monitor and manage ISSP projects in real-time, enhancing project visibility and tracking.
- Collaborated in Agile teams to translate complex requirements into technical designs and actionable implementation plans.
- Delivered a fully functional MVP on schedule, iteratively refining features based on client feedback to ensure high system usability and alignment with faculty needs.
- Developed automated management features to replace manual workflows, significantly reducing administrative workload and improving overall efficiency.

Skills

Languages & Frameworks	Databases & Caching	Cloud, DevOps & Infra.
• Python (Flask / FastAPI) • JavaScript • Node.js (Express.js) • React • Bash Scripting • Prompt Engineering	• MongoDB (ODM) • MySQL / PostgreSQL (ORM) • Redis / Memcached	• GCP / AWS • Docker / Kubernetes • Git • CI/CD (GitLab CI) • Terraform / Ansible • Prometheus / Grafana

Education

British Columbia Institute of Technology

Dec 2020

Computer Information Technology, Diploma (Graduated with Distinction)

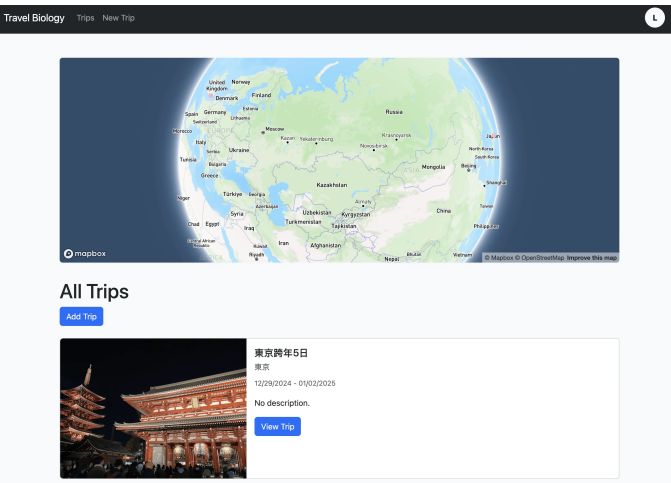

The University of British Columbia

May 2017

Psychology, Bachelor of Arts

Projects

Travel Biology Blog

- Developed a full-stack travel planning platform using Node.js and React, integrating Mapbox for interactive map visualization.
- Implemented user authentication with JWT (Passport.js) and integrated Cloudinary API for cloud-based image storage.
- Designed a relational database with PostgreSQL to manage multi-dimensional trip data, including flights, budgets, and checklists.
- Technologies: Node.js, Express.js, Passport.js (JWT), PostgreSQL, React, Bootstrap, Mapbox, Cloudinary

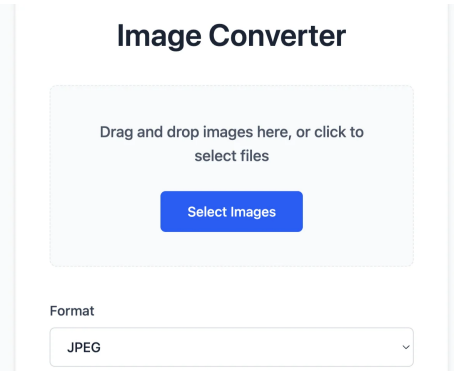

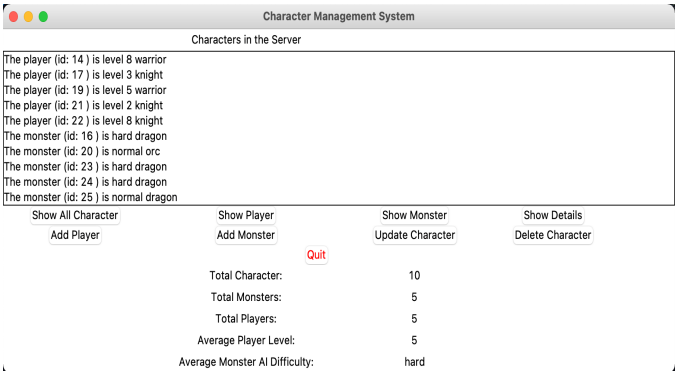

Image Converter

- Built an asynchronous batch processing pipeline using FastAPI and Celery, offloading CPU-intensive conversions to background workers via RabbitMQ.
- Implemented WebSockets for real-time status tracking, utilizing Docker to ensure environment consistency and enable parallel processing.
- Technologies: FastAPI, Celery, RabbitMQ, React, Docker & Docker Compose.

Character Management System

- Created a desktop application for game server management using Tkinter and Flask API to perform full CRUD operations.
- Utilized SQLite for data storage and applied OOP principles, UML modelling, and Unit Testing to ensure high code quality.
- Technologies: Python, Flask, Tkinter, SQLite, OOP, Unit Testing, UML
